Spill-Stop offers a complete line of pourers to accommodate the variations in liquor bottle neck openings common in today's market. The wood or plastic corks are available in different diameter sizes. Please note the pourer only needs to be pushed into the bottle until snug without falling out. It does not need to be pushed all the way down.

While I have measured the fins on the corks and will provide them below I am using a ruler, my 20/20 eyesight, and office lighting so I am not going to state they are exact but a very good estimation of the measurements. With that being said, if you measure the inside diameter of the bottle neck and it is very close to the low or high end of the range you might want to suggest a sample be sent. For Example: Patron and 1800 are handmade bottles and they vary all the time.
